

FIELD TRIP FOR THE STUDENTS OF GRADE IX

Educating the future generation regarding the difficult job our farmers do across the nation is very important. Introducing the students about the development in agriculture and horticulture skills is indeed necessary. It gives them an understanding of what goes on behind the food they buy from the supermarkets - not just in terms of production, but also in terms of the environmental work that goes into it. It is also an opportunity to give the students an idea of farming as a career.

Keeping this in mind the students of Grade IX A & IX B were taken to Welspun Farm, Anjar on Saturday, 16th Dec'17. This field trip was a part of their Co-Scholastic activity. The students were escorted by their teachers.

The students were explained about horticulture. They were acquainted with the common fertilizers and pesticides used, and their application with appropriate equipment and the

development of plants were also explained. The students were also told about the plantation methods, plant conservation, soil management and landscape restoration. They even learnt about the different methods to germinate seeds. Watching children explore things in a way they don't normally, and in a way which encourages

their thinking and imagination is hugely rewarding. This trip indeed had a lot of learning for the students to take back.

A Report from W.V.M.
